

**Responsibilities:****Self learning:**

Contribution: The team has put a lot of effort to complete the tasks given to them. The team discussed the capabilities of each member and divided the work according to it. The team were able to complete most of the tasks by the given deadline. Some tasks that were underestimated were discussed and moved to another sprint to be completed. The team after completing their task moved on to helping member that was stuck in particular part or moving on to the next task ahead. The team were distributed and contributed equally on doing the tasks given

Setting goals: The team set a goal in each sprint to complete the task given before a certain date and show it in the next meeting. Another goal that was set was to use agile estimation cards for each task in each sprint. The team tried their best to complete all the tasks given to them for that certain sprint.

Planning: The team made a document where they wrote the times of the meeting and the duration of work they did outside of meeting

Implementation: GitHub was used for the implementation of the website.

Execution: Our team could evaluate the tasks they were doing and make changes if necessary.
